

- Do you have difficulties managing your gasket inventory and different gasket styles?
- Are you looking into reducing working capital?
- Do you want to increase safety in your facility by reducing chances of certain gasket styles being built into the wrong application?
- Are your plant personnel and contractors spending too much time figuring out which gasket to use for each application in addition to identifying and finding the right gasket in your warehouse?
- Do you want a full review of your gasket styles, processes, and installation to make sure you utilize best possible gasket sealing technology for your bolted joint connections?

Gasket Standardization Program

LGG Industrial can help with reviewing your gasket portfolio and make recommendations to reduce gasket styles in your facility. LGG Industrial is a leading distributor with access to all major gasket manufacturers and is able to make unbiased recommendations regarding gasket sealing technology that is best for your facility.

Over the years, LGG Industrial has been able to help many end-users in the refining, petrochemical, chemical and pulp & paper industry to reduce cost and increase overall safety through a gasket standardization program. We have many success stories including helping a customer reduce 50+ gasket styles to only a handful of styles for their facility!

How it works:

LGG Industrial will work with you to identify:

- Current gasket styles used within the plant
- Applications where these gaskets are being used
- Installation procedures that are followed
- Flange and bolting materials used

With this information, LGG Industrial will conduct a full review of gasket styles in comparison to medium, pressure and temperature. On top of that, gasket seating stress calculations will be made to make sure that sufficient load can be applied on the gasket for an effective, reliable, and durable seal.

When making recommendations, customer specific requirements such as AML, fire-safe, emission reduction goals, and others will be taken into consideration. Gasket standardizations programs can be done for an individual site or application or on a corporate level.

At LGG Industrial we have the expertise and product portfolio to help customers like you standardize your gasket materials while reducing cost and increasing efficiency and plant safety!
